

# SolusGuard Mobile Workplace Safety App

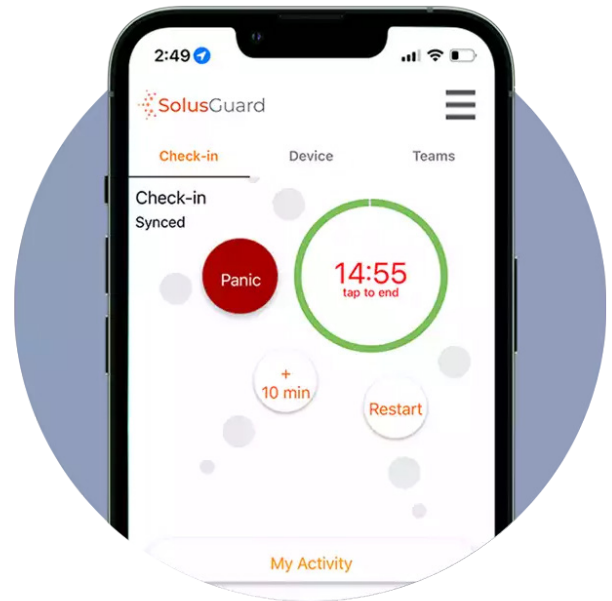

Designed for those who work alone or in unpredictable environments, **SolusGuard Mobile** turns a mobile phone into a powerful distress signal and reliable mobile monitoring device.

## Automate Routine Check-Ins

Automate the time-consuming process of routinely checking in. Your people simply start a timer when entering a period of working alone. An emergency alert is sent if they are unable to confirm their safety before the time expires.

## Monitor Safety From Your Phone

Detect, locate and respond to emergencies with our real-time activity feed; no matter where you are. The feed includes information on the safety status of your entire team and all members of the team are enabled to respond. This helps maintain situational awareness, provides redundancy and makes it easier to coordinate a timely response. No dedicated monitoring staff or equipment required.

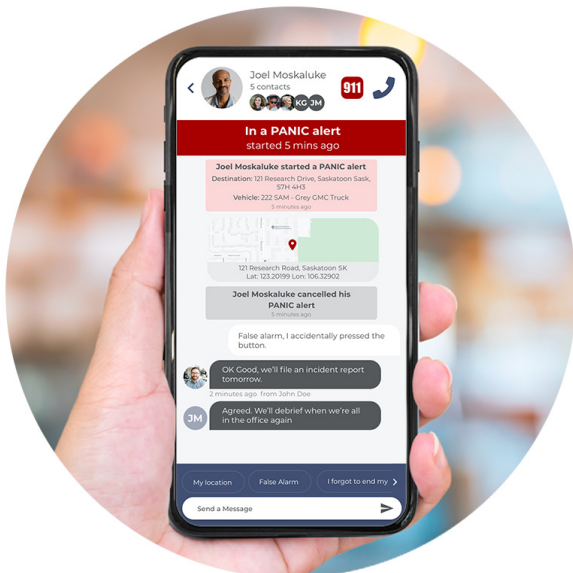

## Connect with Team Communication

SolusGuard Mobile features two-way messaging where team members can directly communicate and share important safety information like emerging or on-going issues. This helps employees avoid potentially dangerous situations and improve response times by keeping the entire team in the loop.

## Reliable Signal for Help

When incidents occur, our Tap SOS provides the ability to quickly signal for help from within the app. Team members instantly receive notification of the alert on their phones and are provided with the GPS location of the person who is in distress.

SolusGuard

# Wearable Panic Button

## Quickly and Reliably Signal for Help

In high-risk situations, just a matter of seconds can mean the difference between life and death — people can't afford to scramble with finding and unlocking their phones, opening an app, making a call, or waiting for a monitoring service to handle the alert.

A quick press of the **wearable panic button** and our SolusGuard Mobile workplace safety app instantly alerts a network of emergency contacts.

## Patented Backup Call

Many wearable panic buttons fail to handle situations like locked phones or closed and unavailable apps. This leaves your people vulnerable.

With SolusGuard, our exclusive and patented failsafe technology was designed to reliably and consistently call **911** in an emergency, even if the phone is locked or the app is closed or unavailable.

## Better Safety, By Design

**Easy to Use** - No complicated instructions and no fumbling with a phone.

**Discreet** - Worn as either a belt loop clip or as a pendant; both options allow easy access and can be hidden in difficult situations.

**Reliably Rugged** - Designed for unpredictable environments, the device is completely sealed making it water and dust proof.

# SolusGuard Aware Safety Management

Built for your organization's managers, **SolusGuard Aware**, our web-based platform, provide the tools needed to improve situational awareness, generate reports and communicate emerging or on-going safety issues.

## Location Tracking

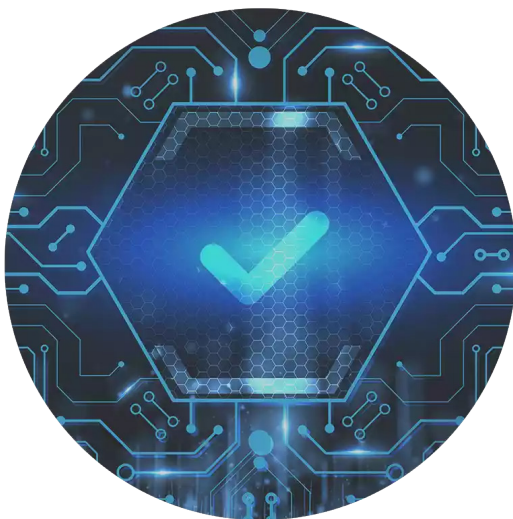

Gain real-time visibility of the location and wellbeing of your team with map view. Event types include active and missed check-in sessions.

## Two-Way Communication

Keep your team connected with real-time communication. Quickly notify people of emerging threats or directly respond to distress signals.

## Prove Compliance

Organization's have a legal responsibility to do everything they can to keep workers safe, and we help employers meet that obligation by providing the tools to prove compliance.

## Team Management

SolusGuard was built specifically for improving the safety of large and complex teams. Our flexible management tools allow you to administer teams of thousands across North America.

## Better Safety Reporting

What gets measured is managed. All events and communications within SolusGuard are logged, making it easy for organizations to generate reports, audit their safety programs and better manage their organization's safety.

# SolusGuard Satellite Extender

When your lone workers are in remote locations or are out of cellular service range, our **satellite extender** helps keep them protected.

## Always On, Anywhere

For remote workers, our satellite extender provides always on protection, even when cell coverage is unavailable. Ensure people can still call for help or signal a missed check in no matter where they are.

## Rugged & Reliable

Our satellite extender was built for reliability in the harshest of environments. We offer military grade, freeze resistant construction and best-in-class reliability of any satellite messaging product.

## Set It & Forget It

Our satellite extender does not require any special skills or training – just sync once with a phone and go. The extender senses when cellular coverage is unavailable and automatically activates without instruction.

## Cost Effective

The extender can be shared among your people and is a fraction of the cost of other satellite solutions.

# We Save Lives.

Our vision is to lead the way in leveraging technology to protect people. We do this through building advanced software and cutting-edge hardware.

Our team is comprised of people who live and breathe safety and strive to help our customers protect their people and their organizations. We have helped improve the safety of thousands of people who work alone. It's our ultimate responsibility and is the reason behind everything we do.

When it comes to something as important as your safety, we never cut corners. We create exceptionally safe and reliable experiences by building to a more rigorous set of standards. Designed and built by SolusGuard in North America, our technology is best-in-class.
